

```
console.log(a); //error
let a = 10;
console.log(b); //ud
var b = 100;
console.log(x); //error
```

→ {

} → blocks

if { }
for { }

let a = 20
T.O.O hard code

array []
till 1000

it is used to write multiple statements inside it

group

if (true) { }

if () { }

for (i=0; i<10; i++) { console.log(i); }

APL

let const

block scoped

f = {
= {
= {
} this block

variable created
using let & const
can be accessed
be original

—

var

function scoped

function() {

can be accessed
or inside this fn

var
3

globally
accessible
if not created
inside fn
